

Renal clinical studies bring unique opportunities and challenges to clinical research that can impact timelines and efficiencies

The complex and changing nature of chronic kidney disease requires deep renal knowledge and a data-driven approach from study design to patient recruitment.

Incorporating study conduct into the complex and structured dialysis care environment is a challenge.

When studies don't fully leverage the expertise of operational and disease state experts, it is a missed opportunity that can delay timelines.

Increasingly specific inclusion/exclusion criteria increase the need to access a large and broad population.

Meeting the demands of renal clinical studies requires a partner with renal research expertise and renal operational experience.

Quintiles brings over 30 years of clinical expertise, established processes and cutting-edge technology to transform clinical development.

DaVita Clinical Research (DCR) is a wholly owned subsidiary of DaVita HealthCare Partners Inc, a leader in kidney care. Together, they bring 20+ years of renal research, leading nephrologists, an established infrastructure of dialysis facilities and a deep understanding of renal patients.

Globally, Quintiles' partner sites recruitment rates are **50% higher** than non-partner sites, on average (2012)

Three-time consecutive winner of **SCRS Eagle Award (2013-15)**

Quintiles helped develop or commercialize **50% of all new NME/BLA Nephrology products** approved 2004 through 2013

DCR helped develop **100% of ESRD drugs** receiving FDA approval between 2001 and 2015

180,000 patients at 2,270 DaVita Kidney Care outpatient dialysis centers

90,000 CKD patients receiving treatment at HealthCare Partners clinics

Working together, we can combine world-class renal clinical care expertise with industry-leading clinical research acumen to help you meet your timelines.
